

TUTORIAL

GENERATING HTML-BASED REPORT OF SERVER PERFORMANCE

[Note: This tutorial presumes basic knowledge in HTML programming on the part of the user.]

TABLE OF CONTENT

Chapter	Name of Topic	Page
1	Introduction to the HTML-based Report Generation Feature This chapter provides an overview of how a HTML-based report may be generated for monitoring entries in Servers Alive. The three steps involved in report generation are outlined. 1.1 Foreword 1.2 Step I: Preparing a HTML template file with a .htm extension 1.3 Step II: Introducing this template file to Servers Alive 1.4 Step III: Mapping entries to the template file introduced in Step II 1.4.1 Situation 1: You have a single entry in Servers Alive, or a bunch of disparate entries not joined together into a group 1.4.2 Situation 2: You have entries joined together under a single group 1.5 End Word	
2	Creating A Basic Report For A Single Entry This chapter presents a case where a single entry is to be monitored, using special HTML tags created by Servers Alive. 2.1 Foreword 2.2 Basic Tags 2.3 Basic HTML Files 2.4 Corresponding Output - Single Entry 2.5 Corresponding Output - Multiple Entries 2.6 End Word	
3	Handling Multiple Entries In Groups This chapter discusses a HTML template file that allows monitored data from a group of entries to be presented in a sleeker format. 3.1 Foreword 3.2 Tags for Groups 3.3 Step 1: Introduce relevant entries to Servers Alive	

	<p>3.4 Step 2: Create a HTML template file</p> <p>3.5 Step 3: Introduce the HTML template file to Servers Alive</p> <p>3.6 Output File for Group of Entries</p> <p>3.7 End Word</p>	
4	<p>More Powerful Report Generation Using Conditions</p> <p>Servers Alive has in its arsenal powerful HTML tags that can be used to generate reporting when specific conditions being satisfied.</p> <p>4.1 Foreword</p> <p>4.2 Tags for Conditions</p> <p> 4.2.1 The <saif> and </saif> tags</p> <p> 4.2.2 Servers Alive variables that can be checked</p> <p>4.3 Basic HTML Template File involving conditions</p> <p>4.4 Corresponding Output - Basic Report, but involving Condition-Tags</p> <p>4.5 HTML Template File involving Groups and Condition-Tags</p> <p>4.6 Corresponding Report - Multiple entries joined in groups, with condition tags</p> <p>4.7 End Word</p>	
5	<p>Reporting involving Round-Robin Database (RRD) Tools</p> <p>This chapter focuses on how Servers Alive, in conjunction with RRD Tools, provides very powerful information in the form of HTML reports.</p> <p>5.1 Foreword</p> <p>5.2 Tags for RRD</p> <p>5.3 Using RRD within Servers Alive</p> <p>5.4 HTML template file with RRD and Conditional tags</p> <p>5.5 End Word</p>
